

Experiment-18- Multimedia Network

The screenshot displays the Cisco Packet Tracer software interface. At the top, a network topology is shown with a central switch labeled 'S2601' connected to four PCs: PC0 (192.168.10.1), PC1 (192.168.10.2), PC2 (192.168.10.3), and PC3 (192.168.10.4). Below the topology, three terminal windows are open, each showing the output of a 'ping' command from PC0 to a specific PC:

- PC0 PING 192.168.10.1 (PC1):** The terminal shows a successful ping with 5 packets, all received (5/5) and 0% loss.
- PC0 PING 192.168.10.3 (PC2):** The terminal shows a successful ping with 5 packets, all received (5/5) and 0% loss.
- PC0 PING 192.168.10.4 (PC3):** The terminal shows a successful ping with 5 packets, all received (5/5) and 0% loss.

On the right side, a 'TOPOLOGY - ALL LINKS ACTIVE' window shows the same network diagram, confirming that all links are active.
